COMPLETE SYSTEMS FOR SAFER LIFTING

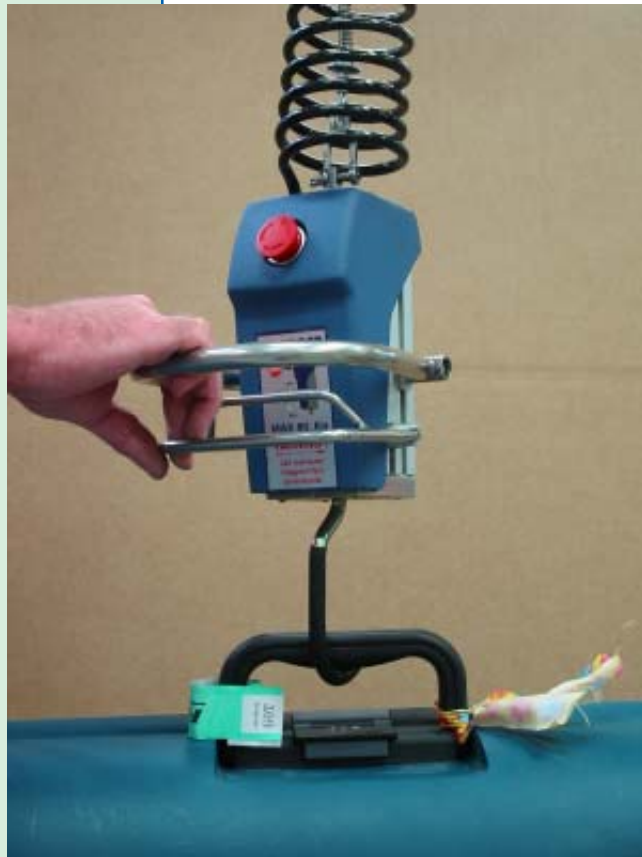

## Easy lifting at Swedish airport

*TAWI minihoist TH80 equipped with a rubber sheated hook is used in the baggage handling area of this Swedish airport.*

A simple solution, it may seem, but evaluations of more complicated grasping/holding solutions proved to be too timeconceiving.

TH80 handles the vertical movements swiftly and with no operator effort at all. The horizontal movements are manual, with Lyftman aluminium crane systems installed in the ceiling construction to hold and carry the minihoist and baggage.
